

HOW TO TAKE CARE OF YOUR DOOR MAGNETS:

1

Before placing your magnets on your vehicle, make sure the surface has been cleaned with alcohol or a multi-purpose cleaner. Be sure to also clean the back of the magnet to ensure zero dirt or dust will get in between your magnets and your vehicle so it doesn't fly off!

2

To store your magnets, make sure they are laid on a flat surface. It is important that your magnet stays in a flat position so it does not warp. If your magnet has warped, it may not adhere to your vehicle as securely as it should and your magnet could fly off. Also, be sure you store your magnet in a cool & dry place.

3

To fix a warped magnet, simply lay it flat and put a heavy object evenly on top to flatten it out. Leave this for at least 12 hours.
